***Reasons for allowance***

The following is an examiner's statement of reasons for allowance:

The instant invention is deemed to be directed to an unobvious improvement to a pressure regulating device over PCT Publication WO00/78510 which teaches a pressure regulation device for a hydraulic percussion appliance, comprising a body (not numbered) within which is formed a bore having a plurality of zones of different diameters, in which is mounted a piston 3 having a plurality of zones of different diameters, the bore and the piston delimiting a plurality of chambers connected to the hydraulic circuit, in order, under the action of a distributor, to ensure an alternating movement of the piston which strikes against a tool, wherein two axially offset components E,C are mounted in the bore of the body and concentrically to the piston, one of the components C being immobile and the other component E being mounted slidably in the bore and displaceably in the direction of the immobile component under the action of the hydraulic fluid feed pressure which is exerted on that face of the movable component which faces away from the immobile component.

Prior art fails to teach or suggest a deformable washer is arranged between immobile and movable components, the displacement of the movable component causing a deformation of the elastic washer in order to give rise to a passage of variable cross section on the circuit for the return of the hydraulic fluid towards the reservoir or on a circuit which diverts part of the feed flow of the appliance towards the return circuit, so as to regulate the inlet pressure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Prior Art***

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consist of three patents.

Eskridge (3,592,109) is cited to show a pressure regulating device having immobile and movable components but fails to teach a deformable washer between the components.

Juvonen (4,084,486) is cited to show a pressure regulating device having immobile and movable components but fails to teach a deformable washer between the components.

Medina (6,863,260) is cited to show a pressure regulating device having immobile and movable components but fails to teach a deformable washer between the components.
